

Frontend Setup (React with Vite)

The frontend of the **DarshanEase – Temple Darshan Ticket Booking System** is developed using **React.js** with **Vite**, which provides a fast and efficient development environment. The following steps are used to set up the frontend application.

Step 1: Open the Project Folder

Open the **DarshanEase** project folder in **Visual Studio Code (VS Code)**.

Step 2: Navigate to the Client Folder

Open the VS Code terminal and move to the **client** directory using the following command:

```
cd client
```

Step 3: Create the React Application

If the React application has not already been created, initialize it inside the **client** folder using Vite:

```
npm create vite@latest . -- --template react
```

When prompted during the setup:

- **Framework:** React
 - **Variant:** JavaScript
-

Step 4: Install Project Dependencies

After creating the React application, install all the required packages by executing:

```
npm install
```

This command downloads and installs all dependencies listed in the **package.json** file.

Step 5: Start the Frontend Development Server

Run the following command to start the React development server:

```
npm run dev
```

After successful execution, Vite will display a local development URL similar to:

Local: `http://localhost:5173/`

Open this URL in a web browser to access the **DarshanEase** frontend application.

Frontend Technologies Used

- **React.js** – User Interface Development
- **Vite** – Fast Build Tool and Development Server
- **JavaScript (ES6+)** – Programming Language
- **React Router** – Navigation and Routing
- **CSS** – User Interface Styling
- **Axios** – Communication with Backend APIs
